ABOUT THE CONFERENCE

The conference is a multi-faceted presentation of technical and technological achievements within transport equipment used in mining as well as their safety aspects. It will give the participants an opportunity to listen to a number of lectures. The lectures comprise the most recent achievements, scientific and technical knowledge as well as production and operation of transport equipment used in mining. You will be welcome to visit the exhibition where mining - and mining-related companies will present and demonstrate their products and services.

PARTICIPANTS

We have invited the following to participate in the conference:

- mining transport equipment operators,
- producers of mining transport equipment,
- representatives of the companies executing diagnostic testing, repairs and renovations of mining transport equipment,
- scientific and research institutions.

CONFERENCE SUBJECT AREAS

– horizontal and inclined to 45° transport equipment for both people and goods transportation, new trends and operational experience:

- wheeled transport,
- tire transport,
- floor and suspended railway,
- belt conveyor systems,
- hoisting and pressure equipment in transport.

– vertical transport equipment, new trends and operational experience:

- hoisting machines; mechanical and electrical issues,
- rope pulleys,
- hoisting vessels,
- suspension of hoisting ropes and vessels,
- hoisting ropes,
- guiding of hoisting vessels and shaft reinforcement,
- shaft tubing,
- pipelines,
- shaft towers,
- storage reservoirs.

– quality, diagnostics, repairs and renovations of transport equipment in underground and opencast mining:

- products quality vs. durability,
- operating diagnostics of transport equipment and machinery,
- repair- and renovation-related issues of transport equipment and machinery,
- corrosion and corrosion protection.

– producers presentations.

There are 4 lecturing sessions planned, each to include 6 – 8 (20 minutes long) lectures.
